Metodología

Kernel GPR

```
ConstantKernel × Matérn(ν=2.5) + WhiteKernel
```

- **Matérn (ν=2.5):** Modela rugosidad de superficie de parámetros
- **WhiteKernel:** Aísla ruido (desionización)

Dependencia Parcial

$$ROI_{limpio}(x_j) \approx (1/N)\ \Sigma\ \hat{f}(x_j, x_{i,\backslash j})$$

Interpretación

- **$R^2 > 0.7$:** Modelo excelente, predicciones confiables
- **R^2 0.4-0.7:** Usar con precaución
- **$R^2 < 0.4$:** Alta incertidumbre
